Work Experience

Nine Years at Johnson O'Connor Research Foundation (JOCRF)

Primary Responsibilities include aptitude testing, college and career guidance, and research.

I started in our Dallas location and was quickly promoted to Assistant Lab Director, then in 2010 was asked to take over the Director position in Denver to resuscitate a failing office.

Accomplishments

- Developed prototype stopwatch application to individual test specifications and persuaded the board of trustees to pursue an overhaul of a database and score reporting system, which I have been tasked with producing requirements for.
- Refocused marketing efforts in Denver on key demographics and post-engagement contact.
- Reconceptualized company website to encourage investment in an update.
- Collaborated with staff from Chicago and DC offices using Google docs to develop research and statistical analysis training resources.
- Used Final Cut Pro to develop prototype training videos (complete with a blooper reel).
- Used Keynote and Quicktime to create a presentation slideshow that was adopted by the organization's Public Information Director and is used nationwide by other labs.

Education

Da Vinci Coders Javascript Bootcamp (2016)

Twelve week immersive course covering HTML/CSS/Javascript, jQuery, Backbone, and React

University of Missouri (2005)

BA in English
